PROJECTS

- Created different algorithms to analyse the data.
- The method involves plotting graph of moving average for various intervals and then finding residual value of each, the residual values were plotted and then analysed.
- Used a paramter called as Durbin Watson Statistic.
- Used exponential smotthing for another test.
- Thus the both algorithm of moving average and exponential smoothening helped us to predict the best
- forecasting data and trend of the booking that company will have in the fiuture.
- Sales Forecasting Using Moving Average And Exponential Smoothing
